Inventory & Supply
Track what you've got.

100% Web Based. Easy to Use. Easy to Love.

Everything begins and ends with inventory & supply. Our inventory & supply module enables you to easily track inventory across all your sites in real time.

We Move the Way You Move.

GET ACCURATE

Eliminate data entry errors by using mobile barcode scanners to scan stock item barcodes. You'll also spend less time on inventory stock control and reduce understock and overstock.

STAY ACCOUNTABLE

Accountibility is maintained throughout the lifecycle of each request so you can identify the responsible staff member for each action in the fulfillment workflow - both in the supply center, and during the delivery process.

GIVE EMPLOYEES EASY ACCESS

Inventory can also be made available to the workforce to order needed items such as office and computer & IT supplies, and to quickly view supply and inventory levels.

IMPROVE YOUR BOTTOM LINE

Provide a chain of custody and full visibility into your supply processes—helping you reduce losses and provide better customer service for your employees. Performance data consoles for each supply center keep all open requests visible to operators – so, requests not allowed to "fall through the cracks".

TRACK IT YOUR WAY

Configurable on a site-by-site basis or across the enterprise, enabling you to decide the optimal way to organize and manage your supplies. Define the type of items you want to track, and to determine who needs to track them – from within one site or across multiple locations.

Track it your way, with The Trail Manager

TRACK ANY ITEM

Track any item, regardless of item type and functional format – from office supplies to IT, healthcare supplies etc.

RESERVED INVENTORY MANAGEMENT

Make sure reserved inventory is held until you need it, and not a moment before. With reserved inventory management feature, inventory that's been allocated for a specific time will stay put into you are ready for you to go.

IDENTIFY MINIMUM QUANTITIES

Set minimum limits and receive alerts when inventory reaches a critical point so you'll never lose money through lost orders – and every order gets to the right person at the right time.

PERSONAL PORTAL

Give employees visibility into the status of their inventory requests -- supplies and inventory can be requested right from their desktop. With the Personal Portal, employees can also locate any item anywhere on site, see whether a specific supply is on the shelves, ask for specific handling and shipment of an any item, and follow the item until it reaches it's final destination.

SMART OUT OF THE BOX REPORTING

Robust, baseline reports provide the history & stats you need to stay on top of your inventory and supply operations.

REAL-TIME REQUEST MONITORING

Stay on top of supply requests and inventory. You'll get real-time visibility into requests that have been fulfilled, those that are outstanding, and those that are in process – so you know just what to expect, and when to expect it. Supply room staff can also update status and add notes during the execution.

iOS & ANDROID COMPATIBLE

Securely access, update, monitor and report on activity – even when you are away from your desk.

# Out of the Box (and out of this world) Workflow

Before initiating operations, supply center staff use the BearTracks Inventory & Supply module to identify all of their supply centers and configure the inventory on hand for each.

Employees then use the Personal Portal to select desired inventory and create requests. Those requests are automatically transmitted to Manager's portal, where supply center staff members respond by assembling the requested supplies into orders to be delivered.

Delivery requests are automatically forwarded to Bear-Tacks Mail & Parcel Services to accountably manage the delivery process – either directly to individuals or to secure locations such as intelligent delivery lockers.

Inventory counts are updated automatically as deliveries are made. Supply center staff members also use this functionality to manage inventory over time, including receiving new goods into inventory, and performing periodic inventory audits.

Designed with your Inventory Needs in Mind

Power Up Your Inventory & Supply Module with Performance Management

Add BearTracks Performance Management to Inventory & Supply and support corporate efforts towards cost savings and continuous operational improvement.

MANAGE OUTSOURCED SERVICE PROVIDERS to SLA based contracts, and negotiate better contracts based on the actual results obtained.

USE PROACTIVE PERFORMANCE MANAGEMENT to avoid lapses by flagging upcoming deadlines in real time.

OPTIMIZE RESOURCE UTILIZATION while still achieving mandated service levels.

The Bear Difference

GET SMARTER AT EVERY STEP

BearTracks expertly picks up the trail YOU need to track, follows the flow of information seamlessly across one site or multiple sites, captures it in a friendly, easy to use format, and puts it right at your fingertips.

We make collaboration across the entire workplace a breeze. No matter what you need to talk to.
